

AI-Powered Analytics

That Answer Your Questions Instantly

Feature for creating and customizing visuals using natural language.

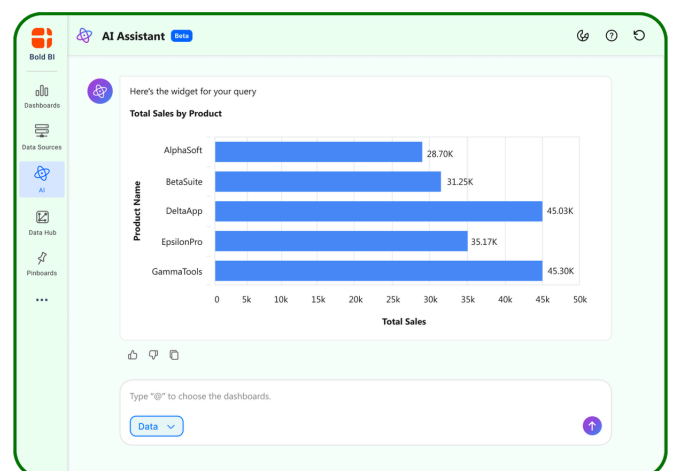

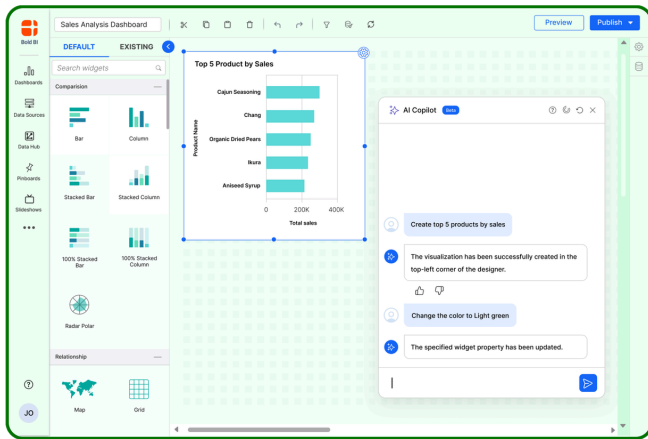

Bold BI brings your data together and makes analytics simple with Generative AI and the Unified AI Agent. Ask questions in natural language, generate visualizations automatically, and transform prompts into interactive dashboards.

Key Features

Instant Insights with Generative AI – AI Copilot in the Dashboard Designer

Bold BI brings your data together and makes analytics simple with Generative AI and the Unified AI Agent. Ask questions in natural language, generate visualizations automatically, and transform prompts into interactive dashboards.

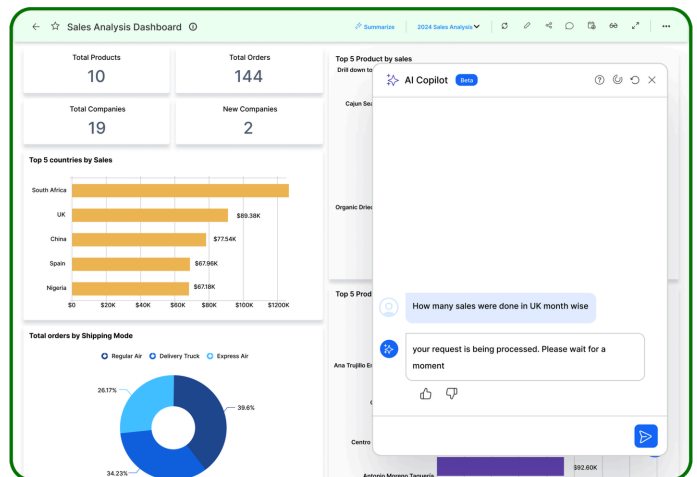

AI Copilot in the Dashboard Designer

Create customized visuals by typing your request in plain English. Adjust chart types, colours, and labels to match your needs. No technical skills are required. Simply describe what you need, and AI Copilot creates the visualization for you.

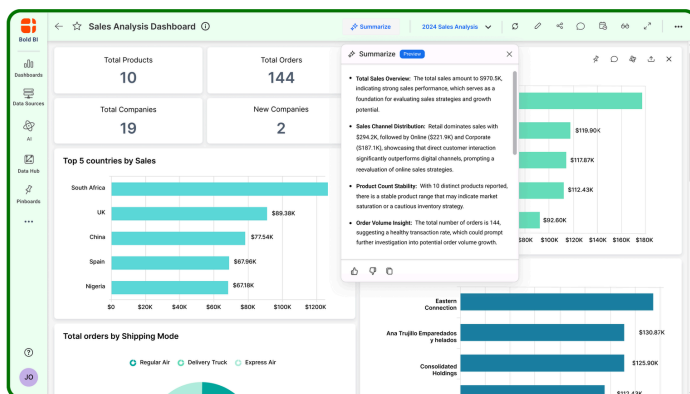

AI Agent in the Dashboard Viewer

Analyse data directly inside dashboards using natural language. Ask questions about trends, compare metrics, identify patterns, and receive contextual answers based on connected business data. View AI-generated responses and visualizations instantly to explore insights faster and make informed decisions.

AI Assistant in Bold BI

AI Assistant provides a centralized conversational experience for exploring data and dashboards in one place. Users can ask questions in plain language, receive instant answers, view AI-generated visualizations, access dashboard summaries, and interact with business data through a single AI-powered interface. This unified experience helps users discover insights faster and make data-driven decisions with ease.

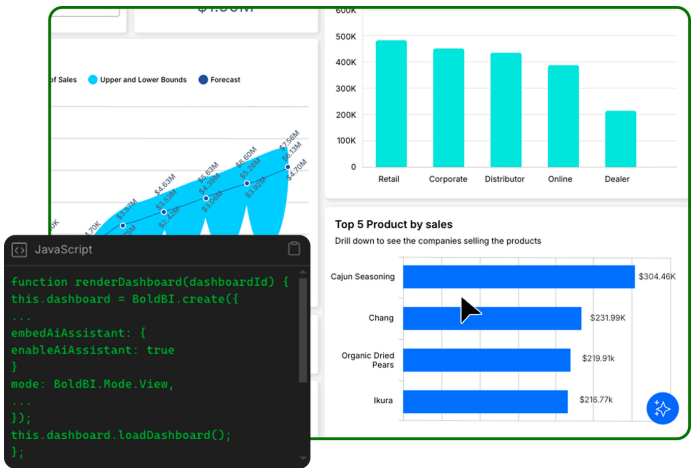

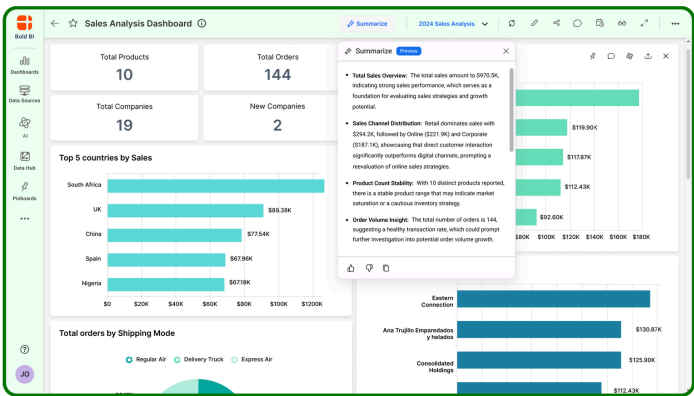

Smart Narrations

Generate easy-to-understand summaries that explain dashboard metrics, trends, and insights. AI-powered narrations help users quickly understand important business information and take action confidently.

Embed AI into Your App

Bring Bold BI's AI capabilities into your applications using JavaScript SDKs or APIs. Deliver AI-powered analytics with full white-label customization, including layouts, colours, and domains, while maintaining enterprise-grade security through SSO, row-level security, and audit logs.

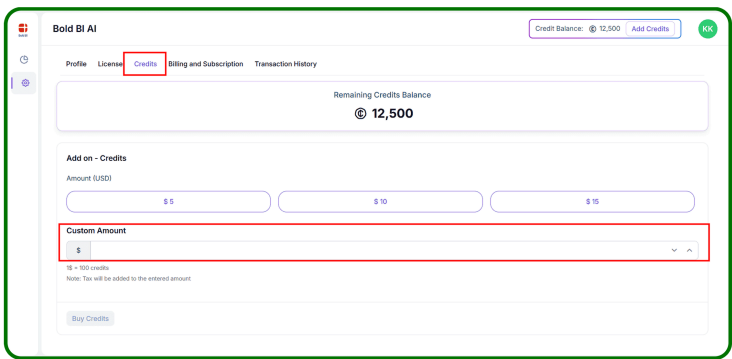

Prompt-to-Dashboard

Convert a simple text prompt into a fully functional interactive dashboard with no manual setup required. AI interprets the request, identifies relevant data, and automatically generates dashboard visualizations, helping users get from questions to insights faster.

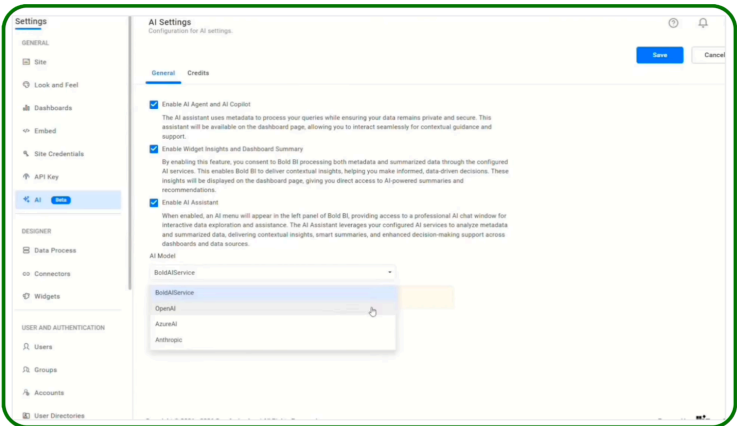

AI Credits Management

Monitor and manage AI usage efficiently with AI Credits Management. Administrators can track AI credit consumption, manage AI-powered operations across teams, and gain better visibility into AI resource utilization across the organization.

Bring Your Own Key (BYOK) Support

Configure and use your own AI provider API keys directly within Bold BI. BYOK support gives organizations the flexibility to connect preferred AI providers, including OpenAI, Azure OpenAI, and Anthropic, using their own credentials. This enables greater control over AI usage, billing, security, and governance while leveraging AI-powered capabilities across Bold BI.

Synonym Support for AI Queries

Improve AI query accuracy with Synonym Support, allowing the AI Assistant to recognize alternative business terms and field names. Users can query data using familiar terminology while the AI maps synonymous terms to the appropriate data fields, resulting in more relevant and accurate responses.

User-Friendly AI Assistant

Streamlined Data Exploration

The AI assistant enables users to create complex visualizations quickly by typing their requirements in natural language, eliminating the need for data modelling or querying.

Enhanced Decision-Making Speed

By providing instant visualizations from natural language inputs, the assistant allows decision-makers to interpret trends quicker, identify opportunities, and address issues without waiting for manual report creation.

Faster Dashboard Creation

The AI assistant enables users to create dashboards using simple, natural language queries, significantly reducing the time needed to build a dashboard.

Easily Accessible to All Users

The AI assistant feature helps democratize data analytics by enabling nontechnical users to create and customize visuals.
