

Embedded Analytics

Platform for SaaS Applications

Integrate interactive dashboards with your application using a JavaScript SDK, powerful APIs, or flexible iframe embedding.

Give your customers easily accessible, advanced, and custom KPIs with embedded BI, available on demand from within your own enterprise software application.

Help your customers become more successful by giving them all the information they need without having to export data to third-party systems.

Data Visualization

Build dashboards with a rich set of visuals and a WYSIWYG editor. No IT expertise required.

Predictive Analytics

Build dashboards with a rich set of visuals and a WYSIWYG editor. No IT expertise required.

Deep Insights

Apply analytics to get deeper insights from data.

Ad Hoc Analytics

Create ad hoc analytics solutions with embedded capabilities as part of your application.

"Our customers are amazed at how we get them to their data so quick."

- Jon Ellis, product manager

Data Security

Incorporate row-level security based on user roles, identities, RBAC controls, and data-level security policies. Secure applications using SSO, modern authentication standards, and enterprise-grade security controls.

Deployment Options

Available as a fully managed cloud, private, or on-premises for full control over your infrastructure, including Windows, Linux, Docker, Kubernetes, Azure, Azure Marketplace, and Azure App Service. You can also run Bold BI as a sub-application in Linux hosting

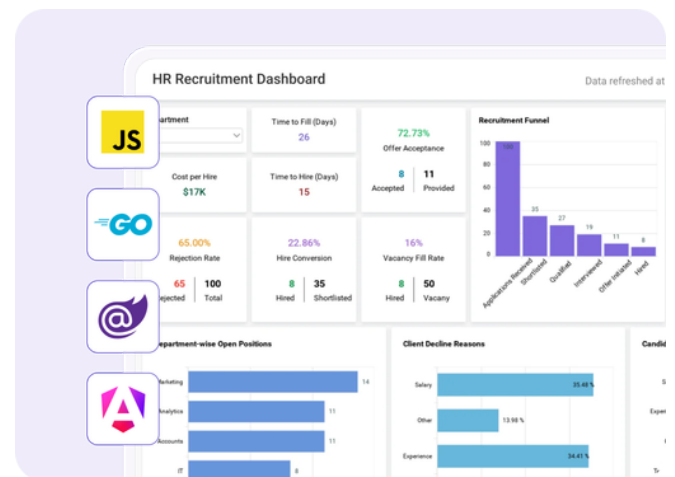

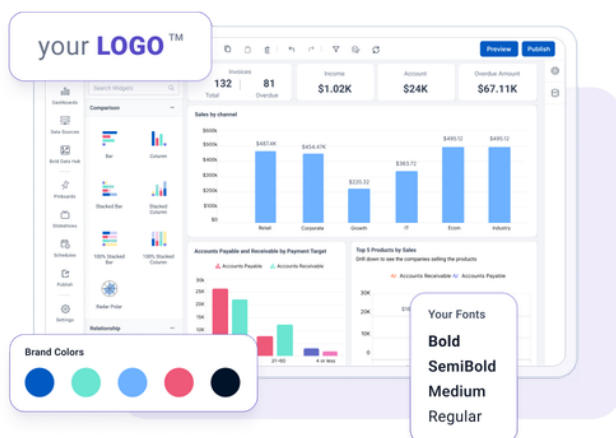

Key Features

If you can imagine it, you can build it.

Rich APIs allow you to control every aspect of embedding, making Bold BI seamless and impossible to distinguish from the rest of the application.

Powerful SDK for all Major Frameworks

Embed dashboards within applications built in a variety of frameworks: ASP.NET Core, ASP.NET MVC, Angular, ASP.NET, Blazor with JavaScript, ColdFusion, Django, Ruby on Rails, React with ASP.NET Core, React with Go, WinForms, Node.js, PHP with JavaScript, Vue with Go, and Vue with ASP.NET Core.

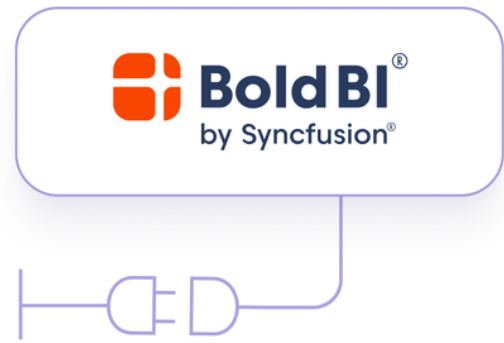

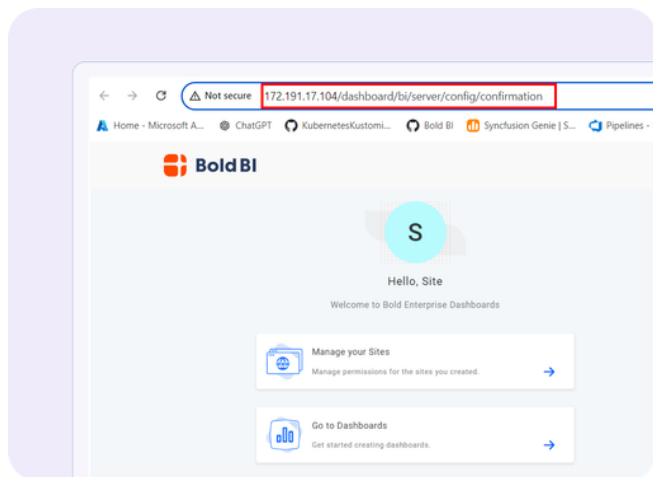

Your Branding, Your Way

White-label dashboards and add company logos or images. Give business applications a branded look with customized themes.

Data Where You Need It

Connect to 140+ data sources including files, relational databases, cloud storage services, and RESTful web services. Depending on the connector, access data in Live or Extract mode for dashboards, reports, and analytics.

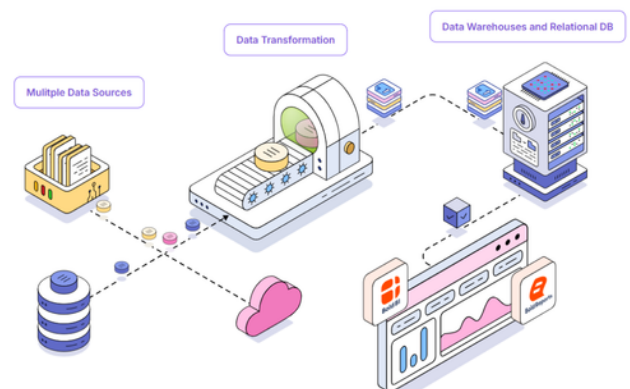

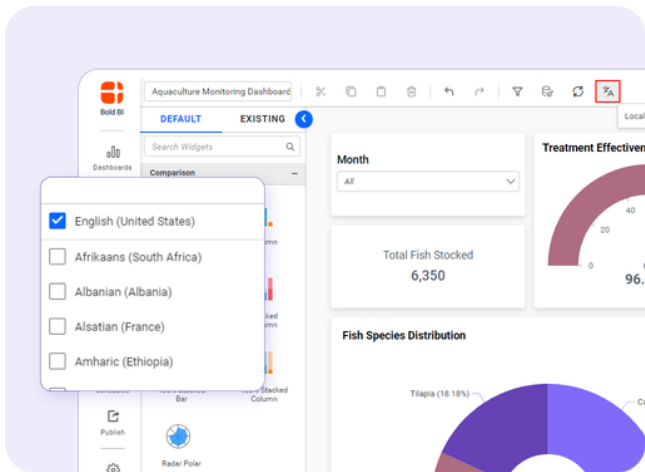

Redistribution is Easy

Seamlessly redistribute with your products. There are no external connections and no vendor-specific cloud requirements.

Bold Data Hub

Bold BI includes the Bold Data Hub tool, which enables users to extract, transform, and load data from data source connectors. Harness the power of Bold Data Hub to manage data flow from various sources, including PostgreSQL, MySQL, MSSQL, and Apache Doris, into the Bold BI data store database effortlessly.

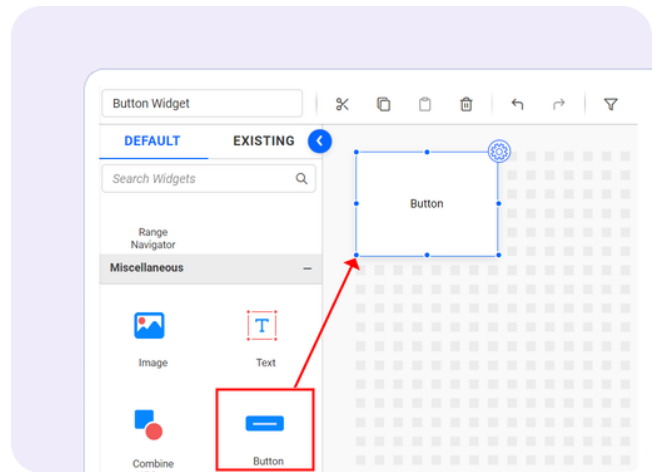

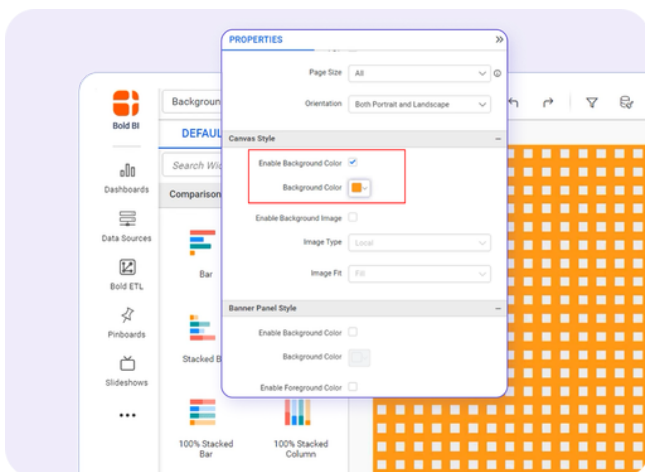

Dynamic Language Translator

The dynamic language translator in the Bold BI embedded analytics platform enables dashboards to support multiple languages, translating widgets for global users. This feature enhances accessibility and inclusivity across diverse regions.

Button Widget Customization & Support

The Bold BI integration platform provides support for customizing button widgets, allowing users to tailor their interface to better meet their specific needs.

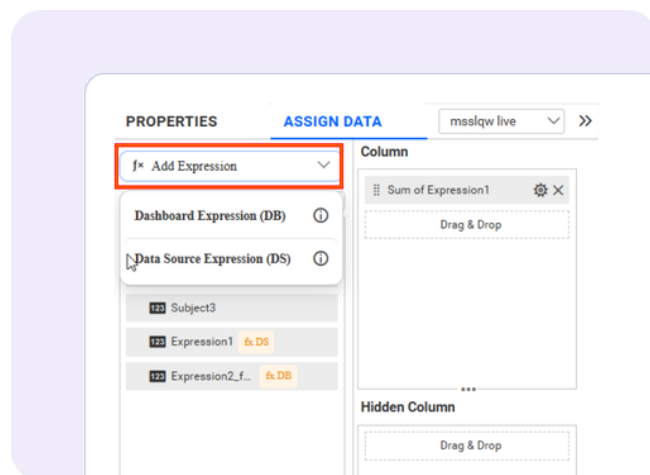

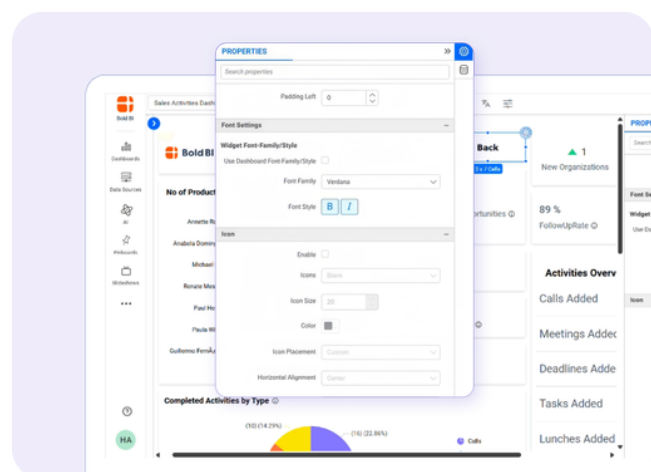

Dashboard Background Customization

Users can customize dashboards by applying background colors or images to enhance visual appeal. This feature allows dashboards to align with branding and improve user engagement.

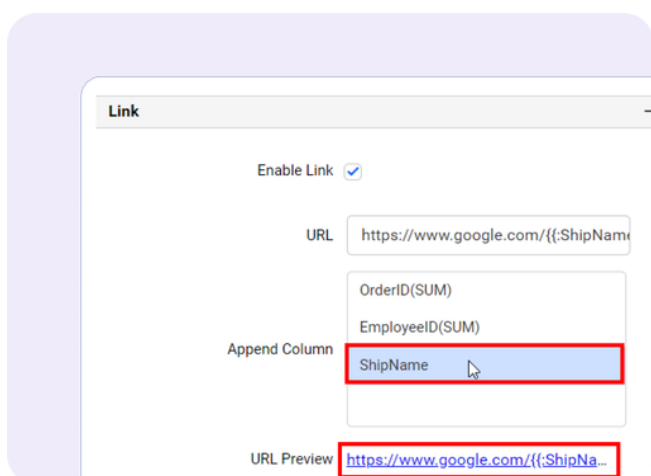

Expression Creation Support in Dashboards

Bold BI now supports dashboard-level expressions, letting you create and manage calculated fields directly within a dashboard based on the selected data source. These expressions are stored at the dashboard level and can be reused across multiple widgets without modifying the underlying data source or requiring edit permissions from the data source.

New Modern Widgets

The Modern Widget Panel now includes updated versions of the Combo Chart, Tree Map, Proportional Charts, Combo Box Filter, Number Card, KPI Card, Date Picker, and List Box, giving dashboards a more consistent, modern visual experience. Rendering status indicators and skeleton loading have also been added across widgets for better visibility into rendering progress during data load.

Dashboard-Level Tab Support for Widget Linking

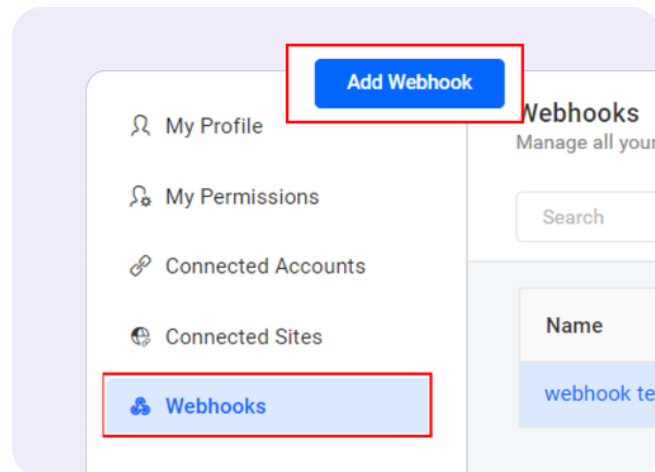

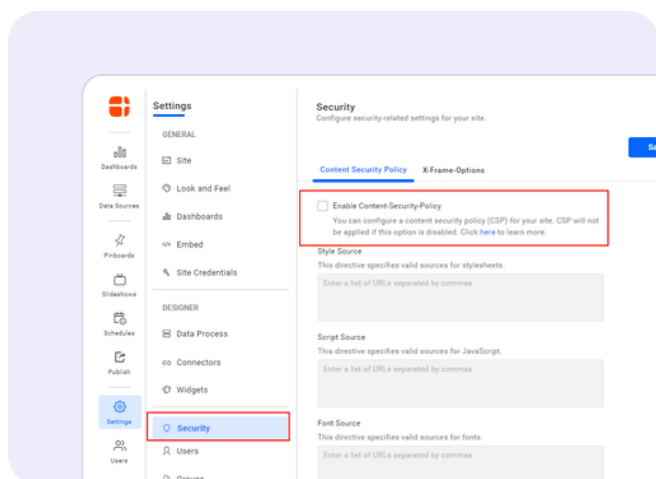

Widget linking now supports navigation to specific tabs within a target dashboard, letting users jump directly to relevant content. Breadcrumb navigation helps track the path taken and makes it easy to return to previously viewed dashboards and tabs.

White-Labeling and Redistribution

Deliver fully branded analytics experiences with white-label dashboards, logos, themes, navigation, and redistribution capabilities.

Webhook Support

Bold BI allows you to create webhooks to deliver data alerts. They can also be used for standard dashboard exporting.

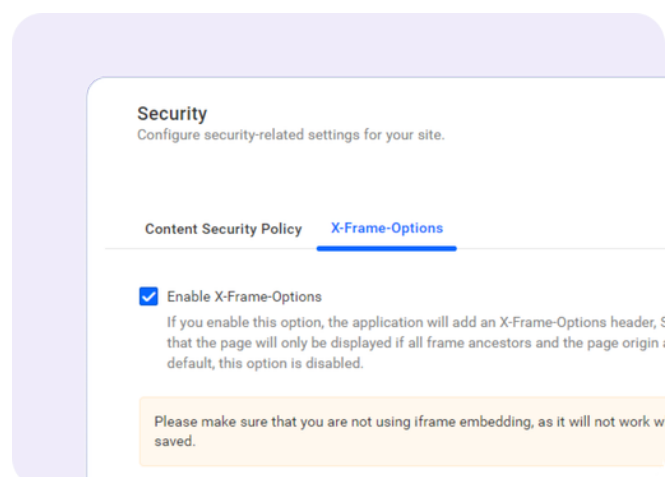

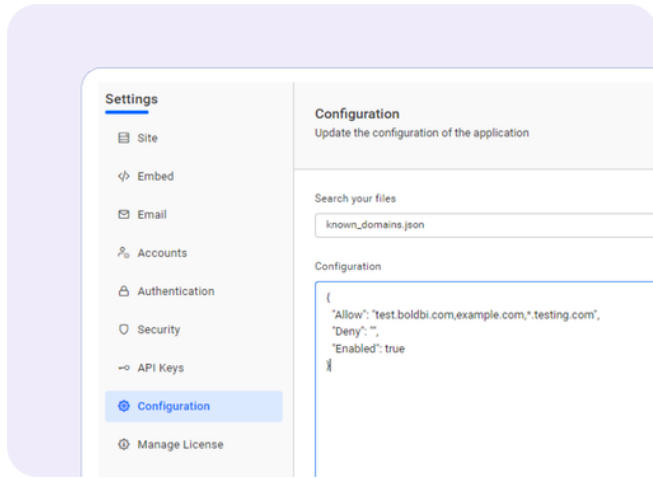

Content Security Policy

Bold BI supports configuring a content security policy. This safeguards content on your domain page.

X-Frame-Options

Bold BI supports configuring X-Frame-Options to avoid loading a BI site inside the frame.

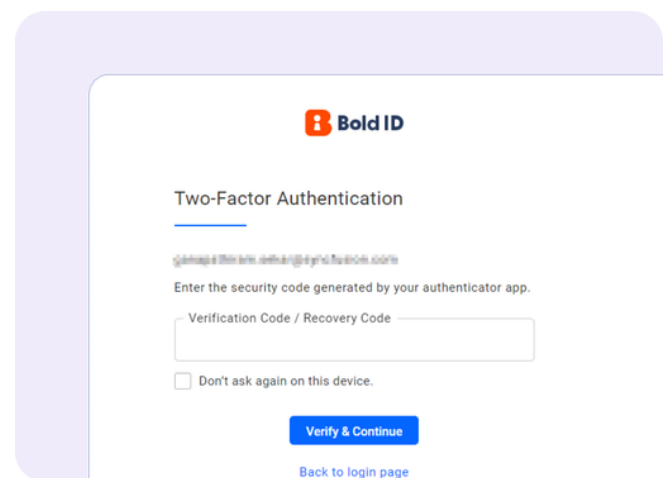

Avoid SSRF Attacks

Bold BI allows you to configure a known domain list to avoid SSRF attacks.

Two-Factor Authentication

Bold BI supports two-factor authentication for logging in. This adds an additional layer of security to your account.

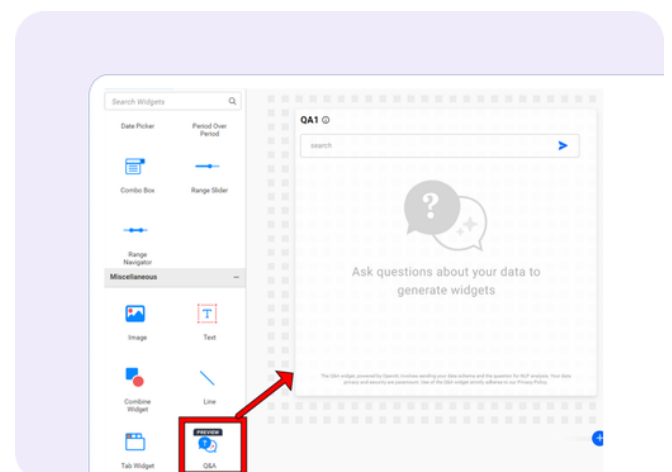

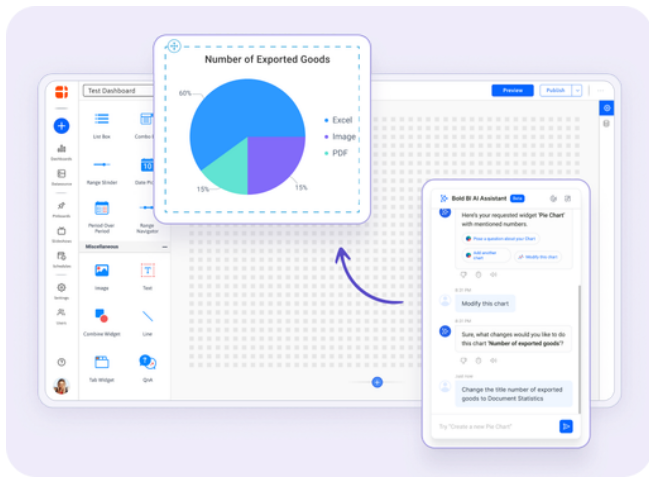

Artificial Intelligence

Translate data into useful data visualization instantly using AI and natural language processing (NLP) capabilities in Bold BI for effortless insights.

AI-Powered Q&A Visuals

Bold BI supports an AI-powered Q&A visual that allows you to create widgets through simple natural language queries. It generates answers to your queries in various visual formats, simplifying the process of converting your business data into insights.

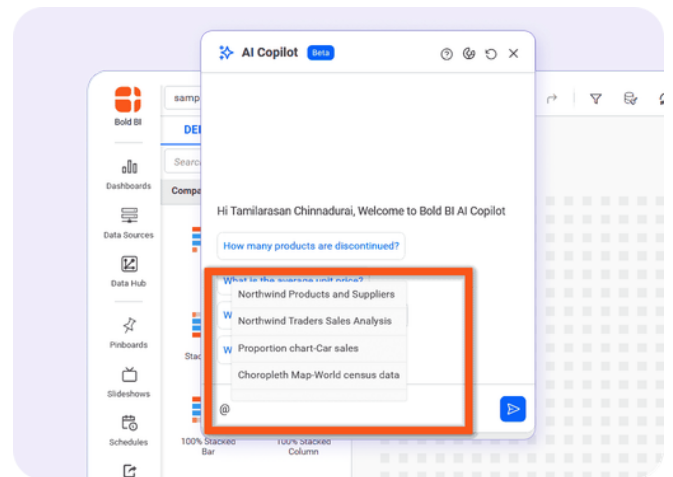

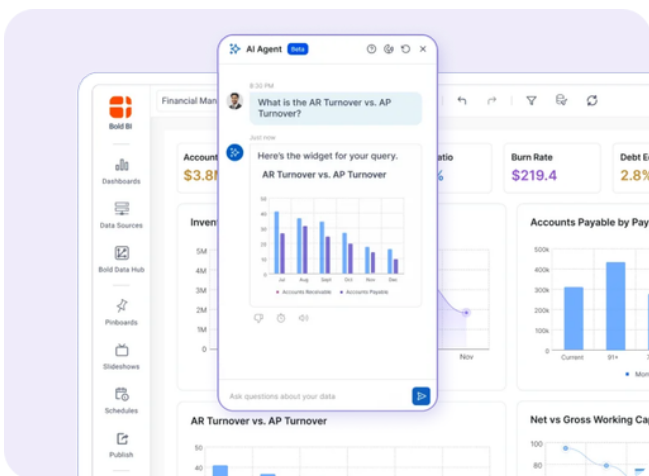

AI Copilot

Bold BI's AI Copilot helps users create and customize analytics content directly within the dashboard designer using natural language instructions. Users can generate visualizations, modify dashboard elements, and accelerate dashboard creation without manual configuration, improve productivity, and simplify the design experience.

AI Assistant

Bold BI's AI Assistant provides a centralized conversational experience across your analytics environment. Users can interact with connected data sources, generate visualizations, create dashboard summaries, and access insights through natural language. With dedicated Data and Dashboard modes, AI Assistant helps streamline analysis while Chat History allows users to revisit and continue previous conversations at any time.

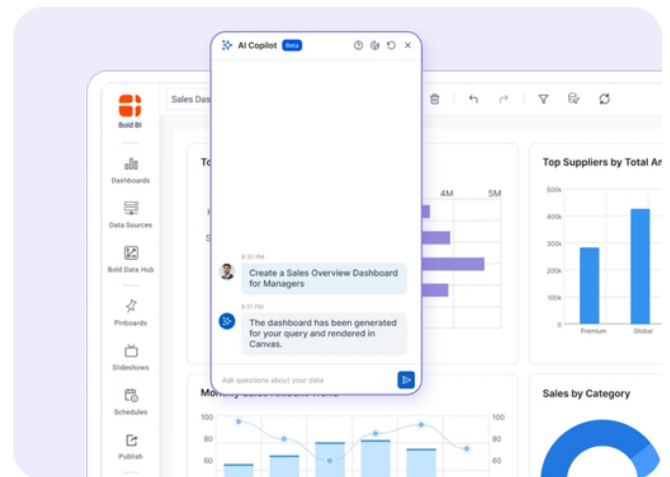

Smart Narrations for Data Clarity

Bold BI generates AI-powered narrations that explain each visualization in simple, easy-to-understand language, with the option to enable or disable summaries for individual dashboards and widgets. This gives everyone an easy-to-read summary to understand and act on key insights faster.

Prompt to Dashboard

Bold BI converts a simple text prompt into a fully functional, interactive dashboard, with AI interpreting the prompt, connecting to relevant data, and building a dashboard with six widgets and value labels enabled automatically. This saves time for non-technical users and reduces reliance on developers or analysts.

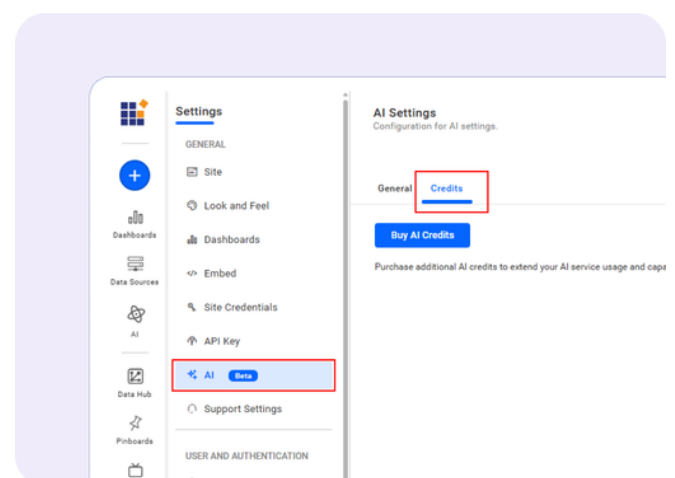

```
<body onload="embedSample();">
<div id="embed_container"></div>
<script>
function embedSample() {
var boldbiEmbedInstance = BoldBI.create({
  serverUrl: "<Bold BI Server URL>",
  mode: BoldBI.Mode.AIAssistant,
  embedContainerId: "<Embed Container Id>",
  embedToken: "<Embed token generated from backend server>"
});
boldbiEmbedInstance.loadAIAssistant();
}
</script>
</html>
```

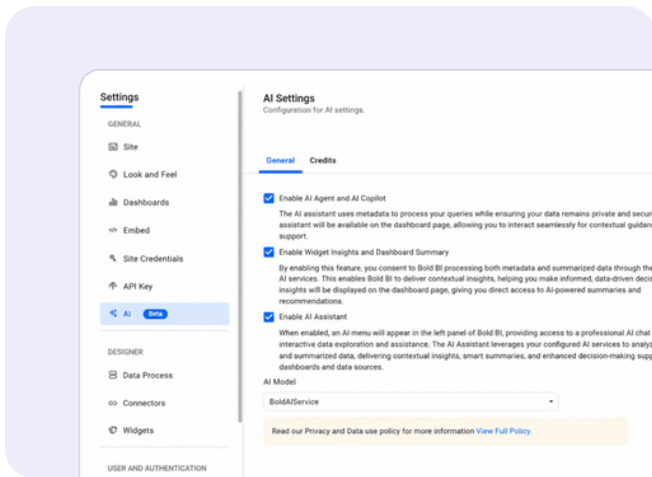

Embed AI Into Your App

Bold BI lets you bring AI directly into your own application using JavaScript SDKs or APIs, with full white-label support to match your branding across layout, colors, and domain. Enterprise-grade security, including SSO, row-level security, and audit logs, keeps your data protected at all times.

AI Credit Purchase Support

Bold BI lets you purchase and manage AI credits directly within the platform, making it easy to continue using AI-powered features without interruption. Track available credit balances and manage AI usage based on your organization's requirements.

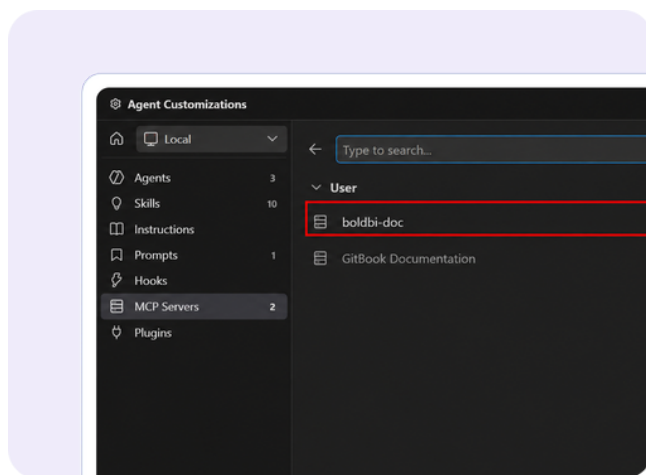

Bring Your Own Key (BYOK) Support

Bold BI supports Bring Your Own Key (BYOK), allowing organizations to connect and use their preferred AI providers with their own credentials. Choose from supported providers such as OpenAI, Azure OpenAI, Anthropic Claude, and other compatible models while maintaining full control over security, governance, usage, and costs. This flexibility enables organizations to align AI capabilities with their business and compliance requirements.

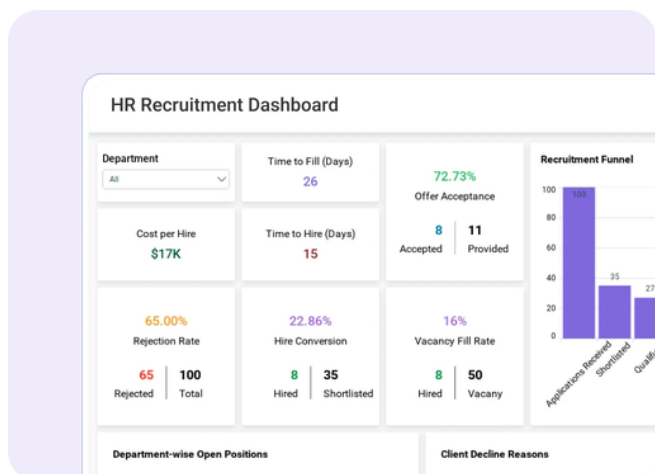

MCP Server Integration

Bold BI supports the Model Context Protocol (MCP), enabling AI assistants and external AI applications to securely access analytics resources through a standardized interface. MCP simplifies integration with AI ecosystems by providing controlled access to dashboards, datasets, metadata, and insights, helping organizations build more intelligent and context-aware AI experiences.

Embed with SSO Authentication

Expanded SSO support with OpenID Connect, OAuth 2.0, Microsoft Entra ID, Okta, Auth0, Keycloak, Amazon Cognito, and enterprise identity providers.

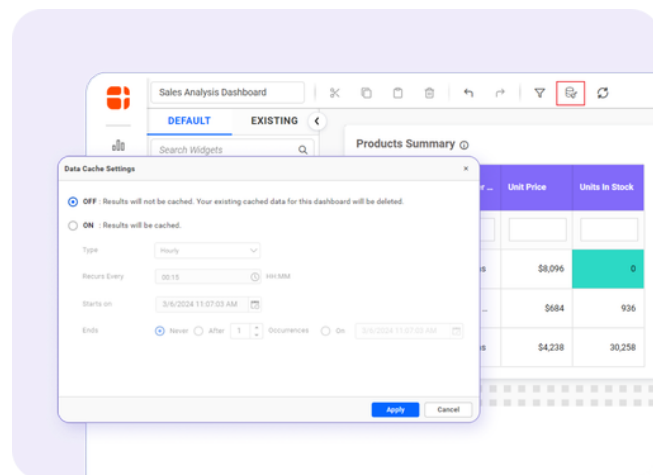

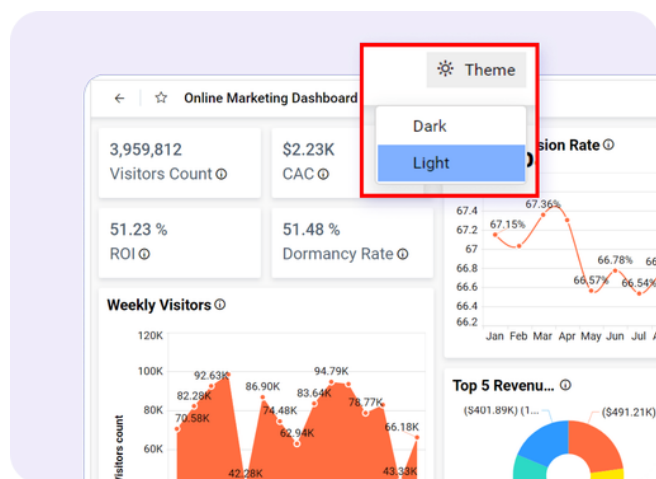

Embedded Dashboards

Embed a dashboard, dashboard designer, and data source designer for external providers in iframe-based embedding.

Data Caching

Bold BI implements data caching to retrieve results faster and keep dashboard data in temporary, low-maintenance storage.

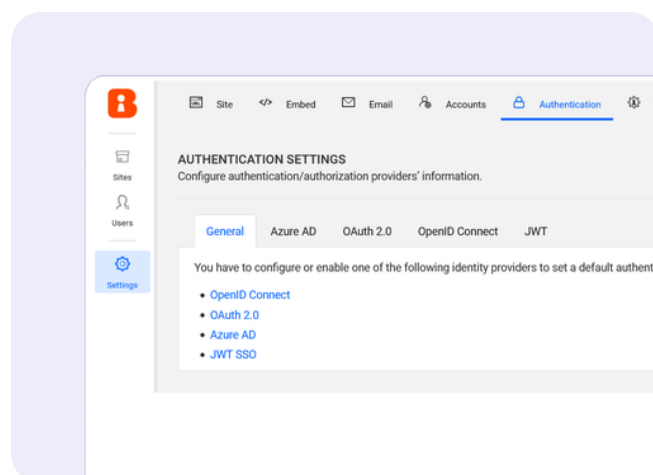

Font and Theme Customization

Bold BI supports theming to customize a dashboard, an application server, and an identity management server with dark or light modes in both standalone and embedded contexts.

Default Authentication Settings APIs

New APIs let you retrieve and update default authentication settings across tenant sites, so administrators can manage configurations more efficiently. This reduces reliance on manual setup for default authentication settings.

Lock Accounts

In Bold BI, you can lock an account if a password is entered incorrectly five times or more.

Enterprise Analytics Platform for Scalable BI

Bold BI helps organizations unify data, build interactive dashboards, and deliver analytics across teams or inside applications at enterprise scale.

Multi-Tenant Support

Serve multiple teams, departments, or customers from a single Bold BI deployment with secure, isolated data access for each tenant. This makes it easy to manage many clients without duplicating infrastructure.

Role-Based Governance

Control permissions with role-based access control (RBAC), restrict data visibility with row-level security, and track every user action in audit logs for regulatory compliance. This keeps sensitive data protected without slowing teams down.

Flexible, Predictable Scaling

Deploy Bold BI on-premises, in the cloud, or in a hybrid environment, and scale usage with stable, transparent costs as your organization grows. There are no surprise fees as your analytics footprint expands.

Multitabbed Dashboard

Multitabbed dashboards allow users to display and interact with multiple dashboards on the same page, creating a centralized platform for data exploration and analysis.

Enterprise-Grade Security

Bold BI enforces strict encryption and meets major compliance standards, including GDPR, HIPAA, and SOC 2. This gives enterprises the assurance they need to run analytics at scale without compromising on data protection.
