

Bold Data Hub

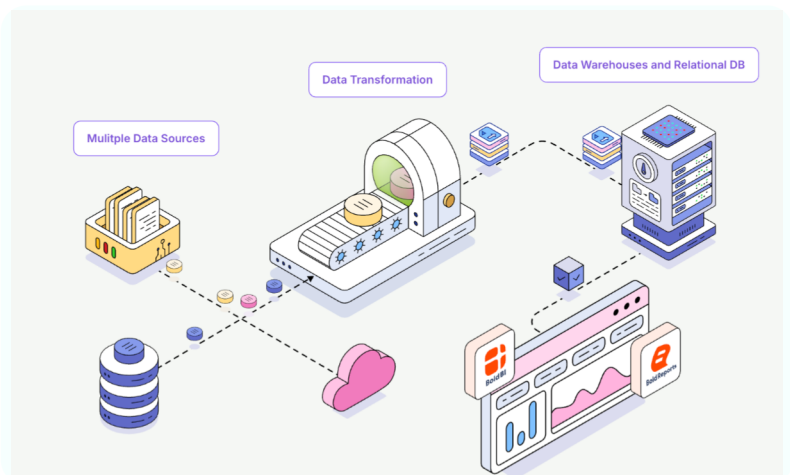

Effortlessly integrate, model, and transform data into a unified, analytics-ready pipeline.

The Bold Data Hub integrates data from multiple sources into a unified pipeline, enabling teams to model, transform, and deliver analytics-ready data. Its ETL capabilities streamline data preparation with automated workflows, ensuring accurate, consistent, and up-to-date data for reporting and analysis.

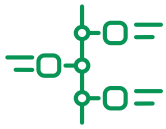

Bold Data Hub Architecture

The Bold Data Hub simplifies the end-to-end data journey from ingestion to transformation and delivery. It enables organizations to connect multiple data sources, automate workflows, and prepare data efficiently. With scalable processing and flexible storage options, teams can manage large datasets and deliver reliable data for dashboards and analytics.

Data Modeling for Everyone

Data Hub simplifies extracting, modeling, and transforming data from multiple sources, enabling teams to easily prepare analytics-ready data.

Seamless Integration

Easily integrate transformed data into Bold BI and Bold Reports for streamlined reporting and insights.

Flexible Loading Options

Load transformed data into your preferred destinations, including SQL databases, cloud storage, or supported data platforms.

Custom Extraction

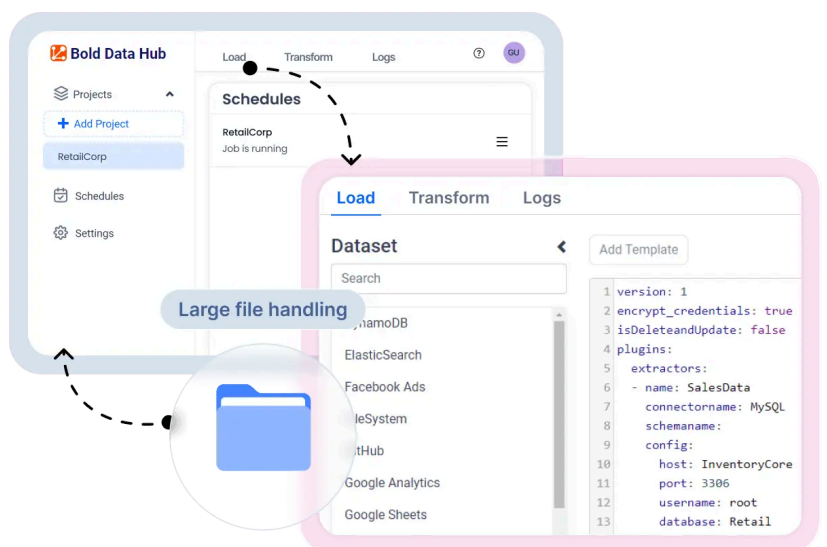

Customize data extraction workflows with automatic or on-demand processes based on your requirements.

Easy-to-Use Data Hub

The user-friendly interface simplifies data extraction and transformation, making it easy to understand data flows and operations as you go.

Scalable Data Operations

Handle large data volumes and complex workflows with a scalable architecture designed for enterprise needs.

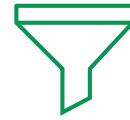

Automation and Scheduling

Automate workflows and schedule recurring processes to ensure consistent, up-to-date data with minimal manual effort.

Large File Handling

Efficiently process large datasets, including high-volume CSV files, with optimized and reliable data pipelines.

Connect Multiple Data Sources with Bold Data Hub

Easily connect and integrate data from 25 plus supported sources, including databases, APIs, and file systems, into a unified pipeline.

Salesforce Reports Integration

Integrate Salesforce report data directly into data pipelines to simplify data preparation for analytics and reporting workflows.

Expanded Data Warehouse Destination

Load transformed data into additional warehouse platforms such as Firebolt, SAP HANA, and IBM DB2 for broader storage flexibility.

StarRocks Destination

Use StarRocks as a high-performance analytical destination to support faster query processing for large datasets.

Presto and Trino Connector

Connect to Presto and Trino engines to handle advanced distributed query processing for modern analytics workloads.
